Summary

Full-stack developer with hands-on experience across mobile and web. Flutter, React Native, Java and NestJS. Currently building enterprise products at Openeyes Software Solutions, with real client deployments and a published research paper. Looking to grow in roles where I can own features end-to-end.

Skills

- **Mobile:** Flutter (BLoC, Provider, Hive, SharedPreferences), React Native (MobX)
- **Backend:** NestJS, Node.js
- **Web:** ReactJS, .NET
- **Languages:** Dart, Java, Python
- **Databases:** PostgreSQL, MySQL, MongoDB, MSSQL
- **DB Skills:** Relational Schema Design, Advanced SQL
- **Tools & Practices:** Git, GitHub, Firebase, Docker, Github Actions, Agile/Scrum

Experience

Openeyes Software Solution

Associate Software Engineer May '26 – Present
Associate Developer Jul '25 – Apr '26
Intern - Products and Projects Dec '24 – Jun '25
Gujarat, India

- Contributed to 50+ screens across enterprise mobile applications, implementing BLoC and Provider architecture on newer projects while maintaining existing MVVM/StreamBuilder codebase
- Sole backend developer on an internal event CRM — designed relational DB schema (7–10 entities) and built REST APIs using NestJS, independently owning the backend end-to-end.
- Integrated Laravel APIs enabling real-time sync and reducing the manual HR coordination effort by 35%.
- Actively developing in-house Flutter toolkit (boilerplates, snippets, base repositories) to standardize repetitive patterns and reduce per-screen setup time across the mobile team.
- Represented mobile team in client-facing demos and technical walkthroughs, translating product features into business value for stakeholders.

Projects

OpenEyesTech Marketing App

Flutter, REST APIs

- Built a QR-driven marketing app with quiz and puzzle modules, deployed at ICE and ATP events with 100+ live users per event.
- Implemented deep linking for QR-based navigation workflows, streamlining the user journey across modules.
- Conducted POCs on Unity AR and ML-based ID data extraction; identified feasibility gaps and prevented high-cost implementations before development began.

HRMS Mobile App

React Native, REST APIs

- Built a mobile frontend for a production-grade HRMS covering role-based access, task and timesheet management, project statistics, expense tracking, and employee detail management.
- Implemented RBAC mobile UI architecture: HR view vs employee view, ensuring each role only accessed relevant modules.
- Integrated REST APIs with authentication enabling real-time data sync across mobile and web platforms.

Academic Projects

- **YourWay App** (*Flutter, Firebase*): Built an all-in-one social travel app for enthusiasts with image posting, threads, real-time chat, and advanced destination search and filters.
- **Mobile Data Terminal** (*Java, SQLite*): RBAC-based law enforcement CRUD system for managing incident records and suspect data across authority roles, inspired by real-world MDT systems used in law enforcement.
- **Theatre Management System** (*VB.NET, SQL*): CRUD desktop application with custom seat mapping, dynamic pricing, and movie management built as a standalone desktop system.

Education

- **Master of Computer Applications** Jul '23 – Apr '25
PIET, PU
- **Bachelors of Computer Applications** Jul '20 – Apr '23
NVPAS, CVMU

Publications

- **Computational Advancements in Multimodal Medical Imaging...**
Published in IJAM (Scopus-indexed journal)

Leadership

General Secretary, NVPAS

'22 – '23

- Led 25+ students and coordinated large-scale events with faculty and sponsors.
